

1) Post Method

• used to send data in the body of the request, often for creating resources.

Syntax:

```
< form action = "/path" method = "post" >  
  < input type = "text" name = "key" / >  
  < button type = "submit" > submit < /button >  
< /form >
```

example :-

```
< form action = "/register" method = "post" >  
  < label for = "username" > username: < /label >  
  < input type = "text" name = "username" id = "User  
    name" required / >  
  < label for = "password" > password: < /label >  
  < input type = "password" name = "password"  
    id = "password" required / >  
  < button type = "submit" > Register < /button >  
< /form >
```

Request

post / register HTTP/1.1

Content-Type: application/x-www-form-urlencoded

username = John Doe & password = secret
